(a) Differentially private FedAvg
non-private FedAvg
Top-5 overlap with pooled model
privacy budget ε (δ = 10^−5)
(b) Accuracy of the same models
non-private FedAvg
Held-out ROC-AUC
privacy budget ε (δ = 10^−5)
(c) Explaining FedAvg with different backgrounds
KernelSHAP background
Pooled
Local
Shared
Top-5 overlap with pooled model
Logistic regression
Neural network
(d) Federated boosted trees (TreeSHAP)
Top-5 overlap with pooled model
Histogram
Bagging
Cyclic
Isolated
